

Kitchen Design

We understand that a Kitchen renovation has the power to transform your home and the way you live. Whether incorporating a new extension, revamping or redeveloping an existing kitchen, our aim is to always incorporate your lifestyle requirements into the room, helping maximising the space through functional, quality of fittings, durability and design. We are dedicated to ensure your finished kitchen works just as well as it looks.

Consultation

An initial consultation provides us with a preliminary understanding of your interests and preferences, while allowing you the opportunity to become familiar with our capabilities. During our first meeting, vital information will be gathered from you regarding the overall project, style preferences, functional requirements and budget. Providing us with images or links to website of the kitchens that have inspired you will assist in the design. We will finish by taking measurements if plans are not available.

Preliminary Conceptual Room Design

Using the plans or measurements we will evaluate your space and use the information to present you with a floor plan, 3D rendered images and preliminary cost for the project.

Secondary Conceptual Room Design

Following on from the preliminary design we will review and incorporate the discussed design and present you with a revised design including plans, 3D rendered images, electrical & lighting design, details of unwarrantable building work, specification of floor coverings and wall coverings. An updated cost plan for the project will also be presented for discussion. If suitable we would visit our supplier's showroom on this day to assist in the selection of appropriate cabinetry, appliances and work surfaces.

Final Project Review and Sign Off

Finally, we will review detailed plans, 3D rendering images and exact pricing for all aspects of the project. We will sign off the design, cabinetry, worktops, appliances, electrical, lighting any other specified item and costs within the project.

Following sign off Elite will agree to a start date for your project.
